Professional Summary

Cybersecurity & Digital Forensics undergraduate at VIT Bhopal with hands-on experience in penetration testing, incident response, and AI-integrated security tooling. Proficient in Python, Flask, and Linux-based environments. Holds Microsoft Security Engineer and IBM Cybersecurity certifications. Seeking roles in SOC Analysis, VAPT, and Threat Detection.

Education

Vellore Institute of Technology Bhopal

B.Tech – Computer Science & Engineering (Cybersecurity & Digital Forensics)

– CGPA: 7.62 / 10.0

Bhopal, Madhya Pradesh

Sep 2023 – May 2027

Sunbeam School Varuna, CBSE

Senior Secondary – Class 12th

Varanasi, Uttar Pradesh

Mar 2022 – Jul 2023

Technical Skills

Cybersecurity: VAPT, OWASP Top 10, MITRE ATT&CK, Incident Response, SIEM, Network Forensics, Steganography, Vulnerability Assessment, Threat Detection, Secure SDLC, Zero Trust

Security Tools: Nmap, Wireshark, Burp Suite, Metasploit, OWASP ZAP, Nikto, John the Ripper, Hashcat

Languages: Python, C++, Java, Bash/Shell Scripting, SQL, HTML/CSS, JavaScript

Frameworks & Dev: Flask, FastAPI, Node.js, Express.js, React, Bootstrap, Tkinter, OpenCV

Platforms & OS: Kali Linux, Ubuntu, Windows, VirtualBox, VMware

Cloud & Tools: AWS, Git, GitHub, Docker (basics), Supabase, MySQL, Redis, Google Colab, Postman

AI & Emerging Tech: Gemini AI, Generative AI, LLM Integration, Prompt Engineering, AI-Security Tooling

Internship Experience

Prodigy Infotech

Cybersecurity Intern

Virtual

Jun 2024 – Jul 2024

- Executed network security assessments and penetration testing simulations across 10+ vulnerability scenarios, improving threat detection accuracy by 30%.
- Designed incident response workflows aligned with NIST and OWASP frameworks, reducing simulated mean-time-to-detect (MTTD) in tabletop exercises.
- Documented threat intelligence reports covering real-world attack vectors: phishing, SQL injection, XSS, and brute-force attacks.

CODESOFT

Cybersecurity Intern

Remote

Jan 2024 – Feb 2024

- Developed 3 secure software modules in C++ using OOP principles and static code analysis to eliminate buffer overflow and memory corruption vulnerabilities.
- Collaborated in an Agile team of 5 implementing Secure Development Lifecycle (SDLC) practices, improving code review efficiency by 20%.

Projects

CyberSec | AI-Powered Cybersecurity Chatbot – Python, Flask, Gemini API, Bootstrap

Aug 2025 – Sept 2025

(<https://github.com/jhanvijyant/cyber-bot->)

- Architected a full-stack AI chatbot delivering real-time threat advisory and incident response guidance, achieving 90%+ contextual accuracy across 500+ simulated queries.
- Built a RESTful Flask backend with session management and input sanitization to prevent injection attacks; integrated Gemini API with domain-specific prompt engineering for OWASP Top 10 coverage.
- Designed a mobile-responsive Bootstrap 5 frontend achieving sub-300ms response latency; reduced generic response rate by 40% via fine-tuned system prompts.
- **Impact:** Educates non-technical users on XSS, CSRF, phishing, malware, and secure coding practices.

AI Resume Analyser

May 2026 – Present

(<https://github.com/jhanvijyant/Ai-resume-analyser>)

- A Streamlit app that analyzes resumes for skill coverage and role-fit — built for CS/Cybersecurity students targeting internships.
- Detects 12+ technical skills (Python, DSA, Cybersecurity tools, Cloud, etc.)

StegaVision <i>AI-Assisted Digital Forensics Tool – Python, OpenCV, Tkinter, FFmpeg</i>	Oct 2024 – Dec 2024
– Developed a forensic toolkit to detect and extract steganographically concealed data from video files, preserving 100% evidence integrity throughout extraction. – Implemented frame-level LSB analysis with chi-square steganalysis and histogram anomaly detection, improving payload detection accuracy by 60% versus manual review. – Built a cross-platform Tkinter GUI with drag-and-drop loading and real-time frame preview, reducing forensic workflow time by 35% in internal benchmarks. – Optimized multi-threaded batch processing for video files up to 500MB, minimizing memory overhead for large forensic datasets. – Impact: Applicable in SOC and law enforcement environments for covert communication analysis and insider threat investigations.	

Certifications

Microsoft Certified: Security Engineer Associate <i>Microsoft</i>	Jan 2025
Introduction to Cybersecurity <i>IBM</i>	May 2026
Generative AI with Copilot in Bing <i>Microsoft</i>	Jan 2023
